

PUPIL WORKSHEET 3

The sketch below shows a crinoid in its life position. It is an animal, not a plant. Use it to help you imagine what this piece of seafloor might have looked like when they were alive.

These animals died and fell onto the seafloor where they were washed around by gentle wave action and broken up into shorter pieces.

Tick off the pieces you can see on the sketch below. Make a sketch of one or two of the crinoid fossils you can see and label as much as you can, and give a scale.
